

Review on the Akiko Audio Power Conditioner Corelli by Modul Kollektiv

Sound enhancement is the key word 🎧. In my last review I checked sound enhancement tools like stands and cables. Today I am invited to check the Akiko Corelli Conditioner. The manufacturer says “its a pioneering reference power conditioner which provides your set with power in a unique way, without the use of electrical components and active power filtering. It reduces noise without negative side effects such as reduced dynamics or natural quality.” OK lets see if that works. Find my review of Akiko Corelli

Conditioner below. Let me know if you have any questions 🤔, personal experiences with Akiko Gear or any other similar products.

Kollektiv Review...

Akiko Audio is a Dutch company based in Maastricht 🇳🇱 and was founded in 2011. The company is focused on manufacturing of high end, hifi and tuning accessories made in NL. 🎧

The Akiko Corelli Power Conditioner comes in a dimension of 215mm width by 311mm length by 100mm height and weights about 6 kilograms. The companies flagship conditioner doesn't include an on/off switch, display or even a signal lamp to prove that the unit is working. The 8mm thick aluminium front panel is energetically treated.

Kollektivo Conclusio...

♥️ To improve the sound quality of your audio system you just need to plug 🌂 them into the power supply. Generally the music sounds smoother and more natural. Especially the bassline seems to be more clean and powerful 🎧. I do not understand the physically reason (it's a company secret) but the conditioner works 👍. Thankfully Akiko was so nice to include a handmade Akiko Audio Powercord HQ FLEX for a better result. Furthermore my brand new Corelli Conditioner contains the black anodized aluminium tubes 🙏. Absolutely noteworthy fact is that Akiko offers a 10 years factory warranty and a 30 days "not satisfies-money back" guarantee. So give it a try !!!

Thank you Akiko for the Corelli 🙏
